EDUCATION

St. Louis Community College

Associate of Science in Computer Science, GPA: 3.9

Expected May 2027

St. Louis, MO

University of Missouri

B.S. in Computer Science (transferring)

Fall 2027

Columbia, MO

EXPERIENCE

Software Developer

Chiang Mai STL Restaurant (family business) | chiangmaistl.com

2026 – Present

St. Louis, MO

- **AI Phone-Ordering Agent:** Eliminated lost sales from missed calls by shipping a production AI voice-ordering agent (**Deepgram**, **GPT-4o-mini**, **Twilio Voice**, **Django**) that answers only when staff can't, takes full takeout orders across the **65-item menu**, and pushes kitchen-ready tickets straight to **Clover POS**
- Guaranteed **zero blocked orders** and reduced telecom-fraud exposure by adding an **SMS fallback** for POS outages, phonetic matching for Thai dish names (e.g. "cow soy" to Khao Soi), and guarded human call transfers with **toll-fraud and loop protection**
- **Staff SMS Dashboard:** Cut misdialed pickup texts and staff time lost during rush by replacing a manual look-up-and-type workflow with a one-click **Clover-to-Twilio SMS dashboard (Django REST, React)**, actively used by staff to send **25+** pickup notifications daily
- **Landing Page:** Grew organic traffic to **63K+ impressions** and **814 clicks** over 12 months with **\$0 ad spend**, earning a **#1 average ranking** on branded searches and **top-10 placement on 71% of tracked queries** by building an SEO-optimized landing page (**React 19**, **TypeScript**, **Tailwind CSS**, **schema.org** markup)

Server

Chiang Mai STL Restaurant (family business) | chiangmaistl.com

2022 – Present

St. Louis, MO

- Greet guests, take orders into the POS, run food and drinks, and manage table turnover through **4+ years** of dinner rushes, gaining daily front-of-house exposure that surfaced the phone-order and pickup-notification bottlenecks the systems above were built to fix

PROJECTS

Corecomp | Django, Django REST Framework, React 19, PostgreSQL, Redis, Recharts | corecomp.cc 2025 – Present

- Gave retail investors free terminal-style fundamentals research (ticker search, company overviews, full financial statements with derived ratios, and composite valuation charts across fiscal periods) through a **Django REST + React/Recharts** platform, at **\$0/month** instead of a paid subscription
- Kept the free tier frictionless yet scraper-resistant by pairing password-free **Google sign-in** (httpOnly rotating **JWT** cookies) with a server-enforced **Redis quota (5 anonymous symbol views/30 days)**, validated by **300+ automated pytest and Vitest tests**
- **Redis Response Caching:** Cached each symbol's financial data (overview, statements, pricing) in **Redis** for **7 days** after the first fetch, guarded by **Redis-backed distributed locks** to prevent duplicate upstream fetches — so once one user looks up a symbol, every other user requesting it is served instantly from cache instead of waiting on a live **WiseSheets API** call

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks: React, Django, Django REST Framework, Django Channels, Tailwind CSS, Vite, Recharts

Developer Tools: Git, PostgreSQL, Redis, Docker, Render, Twilio, Clover REST API, Deepgram Voice Agent, OpenAI API

AI-Assisted Development: Built a Claude Code + Google Stitch MCP workflow for AI-assisted UI/UX generation and development; authored custom Claude Code skills for environment bootstrapping and integrated local testing across three production repositories.

Spoken Languages: Thai (Native), English (Professional Working Proficiency)
